Name: Yuan Wang

Current Status: Junior, Spring 2024 at College Station

Email: yuanw1010@tamu.edu

Personal Experience: When I was in junior high school, I felt in love with computer software knowledge. Since that time, I decided to not only major in computer science, but also achieve high academic achievement in this major. To achieve this goal, I learned computer language knowledge by reading many books in my free time and communicated with teachers after classes. After completing a program and an assignment, I always shared my coding thoughts with my teacher and considered whether there was shortcoming I could overcome. What's more, I invited my classmates who were also interested in python and java to form a team. In this team, we shared knowledge with each other, designed game, and completed program product together. We went to Shanghai and Beijing cities to take part in python and java knowledge competitions.

Personal Achievements:
1. Teamwork: Before attending Texas A&M university, my team members and I have completed several game programs, such as AI Face recognition program, Airplane war game, and Web crawler technology by using python.

2. Individual program design: I completed the Weather forecast program by using HTML, CSS, and JavaScript. I also completed program which is through the way of parkour game to carry on the Chinese history knowledge competitions, and I applied for its intellectual property certificate successfully. In the university, I also learned about computer operating system and C++ algorithm deeply.

3. Certificate: Intellectual property certificate, Microsoft Technology Associate (MTA) certification I, MTA certification II, and MTA certification III.
